

THE HUMAN TRANSITION LAYER

Intelligent systems still depend on human state.

AI can optimize the next action. MindGlitter helps the human choose how to enter it - and helps the organization see where the surrounding conditions may need attention.

THE RECIPROCAL PROBLEM LOOP

What people carry shapes the environment. The environment acts back. Each pass through the loop can compound friction or create room for choice.

THE INTERVENTION ARCHITECTURE

CONTEXT

TRANSITION

MINDGLITTER

CHOICE

A permissioned signal identifies a consequential transition. A MindGlitter moment offers relevant support. The person chooses whether and how to engage.

SUPPORT ON BOTH SIDES OF THE LOOP

FOR THE PERSON

A private, voluntary moment of agency before state becomes the next behavior.

FOR THE ENVIRONMENT

Aggregate patterns reveal where conditions may be reinforcing friction.

SIGNALS IN

Place, time, workflow, event, chosen portal and permissioned preference - never covert emotional surveillance.

EXPERIENCES OUT

Brief combinations of words, breath, sound, reflection or micro-action, curated for the transition and delivery surface.

A NEW ENTERPRISE LAYER

MindGlitter does not replace workflow, learning, wellbeing or experience platforms. It adds a transition-aware layer between context and the human response.

ENTERPRISE SYSTEM

- **Methodology.** maps consequential transitions, feedback loops and intervention opportunities.
- **Context intelligence.** interprets permissioned signals around place, time, workflow and event.
- **Curation layer.** selects an appropriate moment by desired direction, tone and modality.
- **Delivery architecture.** works across mobile, events, physical portals and enterprise surfaces.
- **Measurement framework.** tests aggregate engagement and business hypotheses without exposing private reflection.

TRUST BY DESIGN

No employer-directed emotional compliance. No individual emotional scoring. No access to private reflections or journal content. Leaders see aggregate patterns, not private inner experience.

ENTERPRISE OWNERSHIP

Enterprise access is licensed. MindGlitter retains its IP, technology, methodology, content, brand and roadmap.

USE CASES TO VALIDATE

Arrival, meeting transitions, service recovery, training transfer, AI adoption, shift handoffs, leadership moments and the transition home. Outcomes remain hypotheses until validated in context.

Where does the loop repeat today - and which transition gives you the cleanest place to interrupt it?
